

Posture Pro update

I have been running Posture Pro 5.51 (ID# 2618286015; Unlock code 2565258773) for quite a few years. The additional cervical force feature no longer works, and in checking your site for any type of update, etc., I see you are now producing a version 8 of Posture Pro. Is there anyway that I can update to this newer version?

Thanks

Danny, make sure your patient pictures look exactly like the cartoon figures on the analysis screen. i think you are taking a lateral picture with the wrong shoulder facing the camera. This makes the results backwards.
