

Cannot Load DLL

I am working with Hee Nam Park who is a chiropractor in Highland Park New Jersey.

When I open posture pro I get an error message stating, Cannot load DLL.
What can I do about this message?

Thank you.

ANSWER:

This is a strange issue affecting only a fraction of users. To avoid the error go to C:\PP8\00 and open posture pro from the pp file. You can also right click on the file and drag it to the desktop to use instead of the desktop link the install process creates. Select "Copy Link" This will solve the problem.
