

import image size

Morning Joe,
installed ppv8 last week trying to find solution to image size. when i import image is appox. 1/3 size that it should be. image minimizes only in program. please provide info on how to adjust imported image size to fit screen. thanks
happy new year

REPLY:

Make sure the camera is turned sideways when you take the picture. PP8 is formatted to crop the picture in that orientation. Not turning the camera sideways can make the images smaller.

Also, set the camera for as close to 1024x762 (.7 megapixels) as possible
