Not a Number

When opening Posture Pro I get this error "Not a Number"

Before following these instructions, copy the folder C:\PP8\PPDATA and put it in a secure location. The following instructions should not interfere with that folder, but best to be safe.

Download the latest version of Posture Pro from www.posturepro.com/Download/PP8Install20.exe

Install Posture Pro from that file.

If asked to repair or remove, select remove.

After removal, install Posture Pro again, accepting the default location for the installation (C:\PP8)
