

What is BEAM?

BEAM: A Natural Solution to Aging, When It Matters Most

The **BEAM System** is designed to intervene at the critical stage when the skin's production of collagen and elastin—the proteins responsible for youthful, firm skin—begins to naturally decline. This typically happens in the late 20s to early 30s, making it the perfect time to start preventative care with BEAM.

How BEAM Slows the Aging Process:

Microcurrent Technology:

BEAM's **AXION Wave devices** deliver precise microcurrent stimulation to the skin and underlying muscles. This technology gently activates cellular energy (ATP production), which boosts collagen and elastin synthesis, effectively slowing the visible signs of aging.

Specialized Serums:

BEAM utilizes advanced formulations like the **Wave Extreme Serum**, designed to work synergistically with microcurrent treatments to hydrate, nourish, and repair the skin. These serums optimize the skin's ability to maintain elasticity and reduce fine lines.

Stress Reduction:

Chronic stress accelerates aging by depleting the skin's resources and impairing its ability to regenerate. BEAM incorporates **Vagus Nerve stimulation**, LED Relaxation Station therapy, and aromatherapy to significantly reduce stress levels. This not only improves overall well-being but also enhances skin health from within.

Targeting the Right Time:

By catching clients at the stage when collagen and elastin production begins to slow, BEAM doesn't just react to aging—it proactively slows it down. Over time, clients will notice firmer, smoother, and more radiant skin, with results that last.

BEAM's unique approach makes it a powerful, natural alternative to Botox, helping clients age gracefully by preserving their skin's vitality at every stage of life.
